Good morning,

Here are the answers to your questions:

1. Can you please define these columns?

- a. care_of -----A) Pertaining to mailing address
- b. pav-----A) Permanent Absentee Voter – (vote by mail voter)
- c. lld-----A) Last Transaction date -activity in file
- d. portion-----A) Related to precincts- You are limited to 1000 registered voters per precinct, so portions are created to accommodate those numbers in some cases

2. Can you breakdown what the response options mean for these columns:

- a. Last voted (A and N)-----A) A-means did vote and voted by mail-----N means did not vote

3. Why are all the rows for "Citizen" N? A) Represents no applicable as it is required to be a citizen in order to be eligible to register to vote.

Finally:

How do I Interpret the voting columns:

Does A mean Absentee ballot, N mean not voted and V means voted? A) A Does mean Absentee (vote by mail), N means did not vote, and V means voted.

1. It appears the data is provided for the last five elections for currently registered voters. If there is an NA in one of these columns: ("election_desc_1" "election_desc_2" "election_desc_3" "election_desc_4" "election_desc_5") Does that mean they were not registered or that they didn't vote? **Yes to both**

2. In the ballot counted columns does 1 mean yes and 0 mean no? **Yes**

Joining the files:

3. Can you verify I can Join the data between "MVMJ004_Hist_20240711_104944.txt" and 6000RP2_20240711_105525_DeschambaultLyndaAnn.txt with Columns: voter_id and l_voter_unique_id? **The (2) MVMJ004 Files are meant to work together, but yes, you can link the voter id columns in all**

4. Can you verify I can Join the data between

6000RP2_20240711_105525_DeschambaultLyndaAnn.txt Column: precinct_id and PrecinctList_6000RP2.txt Column: s_precent_id **Yes**
